

Supplementary Fig. 1. Conserved region of designed primer location in partial coat protein sequence alignment of lily mottle virus (LMoV). Sequences with green highlight represent primer, while sequence with yellow highlight represents probe. VPg, viral protein genome-linked; P1, the first protein(proteinase); HC-Pro, helper component – proteinase; P3, third protein; PIPO, pretty interesting Potyviridae protein embedded within the P3; 6 K1 and 6 K2, two 6 kDa proteins; CI, cylindrical inclusion protein; Nla, main viral proteinase; Nlb, replicase; CP, coat protein.
